```
>>> from cookiecutter.main import cookiecutter  
>>> cookiecutter('/path/to/template/dir/')
```

Template with Jinja2

File content

File/folder names

Variables & defaults

cookiecutter.json file inside the
template dir

```
{  
    "full_name": "Audrey Roy",  
    "email": "audreyr@gmail.com",  
    "project_name": "Complexity",  
    "repo_name": "complexity",  
    "release_date": "2013-07-10",  
    "version": "0.1.1"  
}
```

--no-input or you will be prompted

**Not just for
Python!**

Works for anything
